Learn Git and GitHub without any code!

Using the Hello World guide, you'll create a repository, start a branch, write comments, and open a pull request.

Read the guideStart a project

Discover interesting projects and people to populate your personal news feed.

Your news feed helps you keep up with recent activity on repositories you watch and people you follow.

Explore GitHub

 **ProTip!** The feed shows you events from people you follow and repositories you watch.

 Subscribe to your news feed

step 3: Give name to your repository and choose one from private or public. Then click on create repository.

## Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository](#).

Owner \*  / Repository name \*

Great repository names are [Your new repository will be created as IT-Tools. What about fictional-dollop?](#)

Description (optional)

- ☒ **Public**  
Anyone on the internet can see this repository. You choose who can commit.
- ☐ **Private**  
You choose who can see and commit to this repository.

Initialize this repository with:  
Skip this step if you're importing an existing repository.

- ☐ **Add a README file**  
This is where you can write a long description for your project. [Learn more](#).
- ☐ **Add .gitignore**  
Choose which files not to track from a list of templates. [Learn more](#).
- ☐ **Choose a license**  
A license tells others what they can and can't do with your code. [Learn more](#).

[Create repository](#)

### **c) Cloning Repository:**

Step 1: Click on add file button.

Step 2: Click on upload file button.
